Name: Anita Lebene Kwedeha

Age: 36yrs

Gender: Female

Clinical History: Right Flank pain ??ureteric colic

Type of Investigation: Abdomino-Pelvic Ultrasound Investigation Date: 26th March, 2018

ULTRASOUND REPORT

Abdomen

The liver is of average size, measuring 13.9cm MCL with homogenous echopattern. No focal mass or diffuse lesion noted. No intra or extrahepatic bile duct dilatation.

The gallbladder shows normal outline and wall thickness. No gallstones, sludge or mass seen. No pericholecystic fluid seen. Absent sonographic Murphy sign.

The visualized portions of the pancreas is of normal sonographic appearance. No pancreatic calcification.

The spleen is normal in size and echopattern measuring. No focal mass or diffuse lesion

Both kidneys are of average size measuring, right (10.6x3.4) and left (10.7x4.3) cm respectively with good corticomedullary differentiation and normal renal sinus. No focal loss of renal parenchyma. No hydronephrosis, calculi or focal mass noted. Both ureters were not visualized.

No ascites, abdominal mass or lymphadenopathy. There is normal abdominal aorta and IVC

Pelvic

The uterus is anteverted, homogeneous in echopattern and mildly enlarged measuring (10.2x6.1x3.4cm) and contains a large subserosal nodule at the anterior wall measuring 5.9x4.1cm. The nodule is noted to have a calcified rim. Also noted are multiple (about 2) small intramural nodules at the posterior wall measuring about 1.3x1.0cm and 1.4x0. Normal endometrial stripe thickness measuring 5.6mm.

No fluid collection in the pouch of Douglas.

The ovaries are normal in size and echogenicity measuring for 3.0x2.1cm and 3.0x1.1cm right and left respectively. No discrete mass or abnormal fluid collection noted.

The urinary bladder is normal with no calculus or masses noted.

Impression:

- Normal Abdominal Ultrasound.
- No sonographic evidence of ureteric colic.
- Mildly Enlarged Uterus with Large Calcified Subserosal and Multiple (about 2) Small Intramural Fibroids.

Sonographer: Rosemond Adu-Sarkodie
