Name: Felicia Enyonam Kudawoo

Age: 47yrs

Gender: Female

Clinical History:

Type of Investigation: Arterial Doppler Ultrasound (Both lower limbs)

Investigation Date: 09/11/2017

ULTRASOUND REPORT

Noted from the mid-thigh to the ankle and foot of both lower limbs are multiple dilated fluid channels with a cobblestone appearance

Also noted at the upper thigh of both lower limbs are multiple (about 3 each) benign-appearing axillary lymph nodes.

The common and superficial femoral, popliteal and tibia arteries are of normal caliber.

The vessel walls are of normal thickness. There are no artero-sclerotic changes. They show normal high resistance triphasic flow waveform.

The flow velocities are normal. The accompanying veins are grossly normal. The soft tissues are grossly normal.

Impression:

- Features Suggestive of Bilateral Lymph edema.
- Normal Lower Limb Arterial Doppler study of Both lower limbs.

Sonographer: Rosemond Adu-Sarkodie
