Name: Solomon Sedomda Nkansah

Age:22yrs

Gender: Male

Clinical History: Left Nipple Swelling ?Benign cyst

Type of Investigation: Breast Ultrasound

Investigation Date:16/11/2018

ULTRASOUND REPORT

No sonographic evidence of benign cyst.

There is increase in normal-appearing fibroglandular breast tissue of both breasts (L>R) with a triangular –shaped pattern.

Also noted at both are multiple benign-appearing axillary lymph nodes.

No parenchyma mass lesion. No calcification or duct ectasia were seen bilaterally.

No sonographic evidence of abscesses.

Normal overlying skin thickness.

Impression:

- Features Suggestive of Mild Gynecomastia (Bilateral) (L>R)
- Bilateral Axillary Lymphadenopathy.

Sonographer: Rosemond Adu-Sarkodie
