Name: Nana Ama Adumea Addison

Age: 32yrs

Gender: Female

Clinical History: Right Breast Pain, Discharged

Type of Investigation: Breast Ultrasound

Investigation Date: 20/03/2018

ULTRASOUND REPORT

Right Breast

The intramammary ducts of the breast are dilated at the areolar region.

No parenchyma mass lesion or calcifications noted.

No sonographic evidence of abscesses.

Normal overlying skin thickness

Also noted at the axilla are multiple benign-appearing lymph nodes.

Left Breast

There is normal skin thickness of both breasts with normal subcutaneous fat layer, fibro-glandular pattern and muscle layers.

No parenchyma mass lesion. No calcifications or duct ectasia were seen.

No sonographic evidence of abscesses.

Normal overlying skin thickness

Also noted at the axilla are multiple benign-appearing lymph nodes.

Impression:

- Right Breast Duct Ectasia
- Normal Left Breast Ultrasound.
- Bilateral Axillary Lymphadenopathy. (Benign-appearing)

Sonographer: Rosemond Adu-Sarkodie
