

THE TRUST HOSPITAL RADIOLOGY REPORT

P.O. BOX M149, Accra, Tel: 00233-21-761975-8, Email: snithosp@4u.com.gh

NAME: JANET AKITI

AGE: 44YRS

SEX: FEMALE

INVESTIGATION: **MAMMOGRAM**

EXAMINATION DATE: 27/02/18

REPORT DATE: 28/02/18

CLINICAL HISTORY: ? FIBROADENOMA IN THE UPPER QUARANT OF THE
RIGHT BREAST.

REF HOSPITAL/DOCTOR: GILEAD MEDICAL & DENTAL CENTRE

REPORT

Both breasts are equal in volume and density, composed predominantly of heterogeneously dense tissue.

There is normal skin thickness of the breasts. The nipples are seen in profile and are normal. No enlarged axillary lymph nodes seen bilaterally.

A well-defined roundish medium density lesion is noted in the upper outer quadrant of the right breast. It measures 0.8cm. There is no distortion of the surrounding breast parenchyma.

No suspicious masses, parenchymal distortions or microcalcifications seen in the left breast.

IMPRESSION:

Bilateral heterogeneously dense breasts with:

- Solitary benign right breast lesion. DDx: Fibroadenoma, Cyst, Lymph node – BIRADS II (Benign findings).
- Negative findings in the left breast –BIRADS I

Recommendation: Breast ultrasound scan to further characterize the right breast lesion and to rule out obscured lesions.
