Clinical History:

Type of Investigation: Breast Ultrasound

Investigation Date:29/11/2017

ULTRASOUND REPORT

There are multiple small innumerable well-defined anechoic lesions with posterior acoustic enhancement in both breasts with some measuring as follows;

Right breast: 0.5x0.4cm, 0.9x0.3cm, 0.4x0.4cm, 0.9x0.3cm, 0.4x0.2cm, 0.5x0.3cm, 0.6x0.4cm and 0.4x0.4cm.

Left Breast: 0.3x0.2cm, 0.6x0.5cm, 0.5x0.3cm, 0.5x0.2cm, 0.3x0.2cm, 0.8x0.3cm, 0.5x0.4cm and 0.6x0.4cm.

No calcifications or dilated lactiferous ducts noted.

No sonographic evidence of abscesses.

Normal overlying skin thickness of both breasts.

Also noted at both axillae are multiple benign-appearing lymph nodes.

Impression:

- Multiple Bilateral Small Benign-appearing Breast Cysts.
- Bilateral Axillary Lymphadenopathy (Benign-appearing).

Sonographer: Rosemond Adu-Sarkodie
