Name: Professor Edward Twum-Akwaboah

Age:74

Gender: Male

Clinical History:

Type of Investigation: Doppler Ultrasound

Investigation Date:06/04/2018

ULTRASOUND REPORT

Noted from the lower segment of the calf to the foot of both lower limbs are multiple dilated fluid channels with a cobblestone appearance

The common and superficial femoral, popliteal and tibia veins are of normal caliber and show good color and spectral Doppler properties and good wall to wall compressibility. No intraluminal pathologies noted.

The vessel walls are of normal thickness. The flow velocities are normal.

The accompanying arteries are grossly normal. The soft tissues are grossly normal.

Impression:

- Features Suggestive of Bilateral Lymph edema of Both lower limbs.
- Normal Vascular Doppler study of both lower limbs

Sonographer: Rosemond Adu-Sarkodie
