Name: Gladys Atubrah

Age: 42yrs

Gender: Female

Clinical History:

Indication:

Type of Investigation: Breast Ultrasound

Investigation Date: 10/10/2018

ULTRASOUND REPORT

There is normal skin thickness of both breasts with normal subcutaneous fat layer, fibro-glandular pattern and muscle layers.

No parenchyma mass lesion. No calcifications, duct ectasia or evidence of abscesses.

There are multiple benign-appearing lymph nodes at both axillae.

Impression:

- Normal Breast Ultrasound.
- Bilateral Axillary Lymphadenopathy (Benign-appearing).

Sonographer: Rosemond Adu-Sarkodie
