Name: Bright Kwarteng Amoah

Age:32yrs

Gender: Male

Clinical History: Right breast is bigger than left for the past 2 years now

Type of Investigation: Breast Ultrasound

Investigation Date:04/09/2017

ULTRASOUND REPORT

There is increase in normal-appearing fibroglandular breast tissue of both breasts (R>L) with a triangular –shaped pattern.

Also noted at both are multiple benign-appearing axillary lymph nodes.

No parenchyma mass lesion. No calcification or duct ectasia were seen bilaterally.

No sonographic evidence of abscesses.

Normal overlying skin thickness.

Impression:

- Features Suggestive of Gynecomastia (Bilateral) (R>L)
- Bilateral Axillary Lymphadenopathy.

Sonographer: Rosemond Adu-Sarkodie
