Name: Stella Kwakye

Age:34yrs

Gender: Female

Clinical History:

Type of Investigation: Breast Ultrasound

Investigation Date:26/01/2018

ULTRASOUND REPORT

Right Breast

There are two small thin-walled anechoic lesions at the 9 O'clock region of the breast, about 6cm from the nipple measuring 0.6x0.3cm and 0.4x0.2cm.

Also noted at the 10 O'clock region, about 3cm from the nipple are two similar lesions measuring about 0.2x0.2cm and 0.4x0.4cm.

No calcifications or duct ectasia noted.

No sonographic evidence of abscesses.

Normal overlying skin thickness.

Also noted are multiple benign appearing axillary lymph nodes.

Left Breast

There is normal skin thickness of both breasts with normal subcutaneous fat layer, fibro-glandular pattern and muscle layers.

No parenchyma mass lesion. No calcifications, duct ectasia or axillary lymph nodes were seen.

No sonographic evidence of abscesses.

There are multiple benign appearing axillary lymph nodes.

Impression:

- Multiple Small Benign-Appearing Right Breast Cysts
- Normal Left Breast Ultrasound
- Bilateral Axillary Lymphadenopathy (Benign-appearing)

Sonographer: Rosemond Adu-Sarkodie
