Name: Jacqueline A.P. Ayitey

Age:23yrs

Gender: Female

Clinical History:

Type of Investigation: Thyroid Ultrasound

Investigation Date:16/11/2017

ULTRASOUND REPORT

Noted in the left lobe of the thyroid gland is a small hypoechoic nodule measuring about 0.4x0.3x0.4cm. The nodule shows no flow on color Doppler interrogation.

Both lobes of the thyroid gland are heterogeneous and of average size measuring 3.7x1.9x1.4cm and 3.7x1.8x1.6cm for right and left respectively.

Normal sonographic appearance of the isthmus measuring 5.7mm in A.P diameter.

The thyroid gland shows normal flow on color Doppler interrogation.

No retrosternal extension noted.

There are multiple benign-appearing lymph nodes at the cervical region.

Normal sonographic appearance of surrounding vessels and muscle.

Normal sonographic appearance of surrounding structures.

IMPRESSION:

Heterogeneous Thyroid Gland with a Small Hypoechoic Nodule as described above.
