Name: Angela Mary Dei-Awuku

Age: 38yrs

Gender: Female

Clinical History:

Indication: MYOMATA

Type of Investigation: Pelvic Ultrasound

Investigation Date: 28/09/18

ULTRASOUND REPORT

The uterus is anteverted, heterogeneous in echopattern and moderately enlarged in size. it measures (12.1 x 7.1 x 7.7) cm. There are multiple (~five) intramural fibroid nodules of varying sizes in the anterior and posterior uterine wall. The largest mass located at the anterior wall of corpus measures ~ (3.7 x 3.0 x 3.3) cm

Normal endometrial stripe thickness and cervical outline

No fluid collection seen in the pouch of Douglas.

The right ovary is mildly enlarged in size and contains a well-defined, thin walled anechoic lumen roundish mass measuring (3.8 x 3.1 x 3.1) cm giving a volume of 19.2ml. The left ovary is of normal in size and echogenicity and measures (4.1 x 2.1 x 2.9) cm with a volume of 12.9ml. No discrete mass or abnormal fluid collection noted.

No extra ovarian mass or abnormal fluid collection seen at both adnexa.

The urinary bladder is normal with no calculus or masses noted.

Impression:

1. Multiple uterine fibroids as described above.
2. Simple left ovarian cyst likely physiological.

Sonographer: Justice Addo
